

### The recovery rally marches on

- Global shares rose 4.7% and 3.4% in hedged and unhedged terms, respectively.
- Emerging markets continued to struggle (down -0.6%) with political tension within Hong Kong and heightened US tensions driving Chinese equities lower for the month (China accounts for ~40% of the benchmark index making a major driver).
- Australian shares underperformed hedged global shares slightly, rising 4.4% in May. The Technology sector was the most notable performer (up 14.5%) after continued strength from Afterpay following strong user growth in the US and the announcement that Chinese tech giant Tencent had taken a 5% stake in the firm.
- The Australian dollar (AUD) continued its climb from late March lows with an 1.7% rise against major currencies. Coronavirus outbreaks continued to disrupt Brazilian iron ore supply, supporting iron ore prices and boosting Australia's current account surplus. This spurred AUD higher.
- Fixed income returns were positive with both Australian and international bond benchmarks rising 0.3% during May. Domestic and US government bond yields were broadly unchanged while credit spreads continued to contract on following purchases by central banks and further stimulus announcements.

# As leading data begins to improve?

#### Globally

- Global business surveys suggest continued weakness in the near term with the JP Morgan Global Manufacturing PMI remaining in contractionary territory but rising slightly.
- The improvement in these and other leading indicators however suggest the pace of the contraction is slowing and growth is beginning to improve particularly as countries exit lockdown measures.
- We note rising tensions between China and other countries over new national security laws in Hong Kong and a proposed coronavirus inquiry. To date these measures have had limited impact but if they continue to escalate, may exacerbate economic weakness.
- Riots erupted across the US sparked by the death of African American George Floyd. We continue to monitor the situation which may have political and economic implications as it progresses.

#### Locally

- The RBA continued to leave rates on hold in line with its guidance and expectations.
- Australia's first recession began during the March quarter as a -0.3% fall saw government spending and exports being offset by weaker private sector demand.

## Major asset class performance

Asset classes	1 month	1 year %	5 years (p.a.) %
Australian shares	4.4%	-6.7%	4.3%
